In Philly, 90° days are projected to increase from 26 to as many as 40 days per year by the 2020s due to climate change.

**Market Frankford Line**

What is our community doing about it?

At this station, SEPTA is capturing, storing and reusing energy generated by braking subway trains. This reduces energy use, and helps us avoid even more hot days. Philly is the first city in the nation to use this technology.
